

Canyon Lake Release Advisory

Nov. 29, 2018

3:40 p.m.

GBRA is continuing the management of water releases to return Canyon Lake to its conservation pool elevation of 909' msl, and has reduced the water release to approximately 400 cubic feet per second (cfs). Currently, Canyon Reservoir is at 909.46 mean sea level.

In general, releases from Canyon Dam will be comparable to those measured upstream of the reservoir at Spring Branch. Inflows at Spring Branch are presently at 380 cfs.

Releases from Canyon Dam due to weather and/or emergency conditions and may be adjusted without notice. Additional information about Canyon releases and other stream flow data may be found at <https://tinyurl.com/ycpvg2u7>.
