

Canyon Reservoir Advisory
May 31, 2019

GBRA will resume management of water releases from Canyon Reservoir from the U.S. Army Corps of Engineers this morning, May 31. The release will be reduced to approximately 350 cubic feet per second (cfs) through the weekend. Currently, Canyon Reservoir is at 909.68 feet. GBRA will coordinate with the USACE Water Management Office on Monday morning, June 3, on any changes to the flow rate.

In general, releases from Canyon Reservoir will be comparable to those measured upstream of the reservoir at Spring Branch. Releases from Canyon Dam are based on current inflows and rainfall.

Property owners, recreationalists and other stakeholders should take notice of the changing river flows. Additional information about Canyon releases and other stream flow data may be found at <https://bit.ly/2NI2HTz>.
