and other microbial contaminants are available from the EPA's Safe Drinking Water Hotline (1-800-426-4791).

Cryptosporidium

This report was prepared by the Guadalupe-Blanco River Authority. Please contact GBRA at 361/552-9751 or through their website at www.gbra.org for further information.

The EPA and the Center for Disease Control and Prevention (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium state that people with impaired immune systems, such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants, can be particularly at risk from infections. These people should seek advice about the services available to them.

Special Notice for the ELDERLY, INFANTS, CANCER PATIENTS, people with HIV/AIDS

2006 Total Alkalinity as CaCO3 189 1 NA ppm Naturally occurring soluble mineral salts.

2006 Total Dissolved Solids 443 1 1000 ppm Total dissolved mineral constituents in water.

A disinfectant compound of chlorine and ammonia is used to destroy any pathogens (germs) present. Fluoride is added to the water to prevent dental decay in young children.

We are proud to report that the Texas Commission on Environmental Quality (TCEQ) has assessed our system and determined that our water system meets or exceeds all federal and state established water-quality standards. The sampling requirements for your water system are based on this susceptibility and previous sample data. Any detections of these contaminants will be found in this Consumer Confidence Report. For more information on source water assessments and protection efforts at GBRA’s surface water treatment plant, and pumped to the City.

The Port Lavaca City Council meets every 2nd and 4th Monday at 6:30 p.m. at City Hall and all meetings are open to the public. Our office at 361/552-9793 Ext 225.

Questions about water quality can be answered by calling our Customer Service Department at 361/552-9793 Ext. 239 from 8 a.m. to 4:30 p.m. Monday through Friday.

In learning more about the water department, water quality, or participating in the decision-making process, there are a number of opportunities available.

The City of Port Lavaca strongly supports the national primary drinking water regulations compliance process. If you are interested in learning more about the water department, water quality, or participating in the decision-making process, there are a number of opportunities available.

Where Do We Get Our Drinking Water and What Happens to It?

The Guadalupe River, treated at the GBRA surface water treatment plant, and pumped to the City.

**DEFINITIONS**

**Maximum Contaminant Level (MCL)**: The highest level of a contaminant allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. MCLGs allow for a margin of safety.

**Maximum Contaminant Level Goal (MCLG)**: The level of a contaminant in drinking water below which there is no known or expected health risk. MCLGs allow for a margin of safety.

**Action Level** (T): The level of a contaminant in drinking water below which there is no known or expected health risk. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level** (D): The maximum amount of a disinfectant that may be left in drinking water after treatment and before distribution to assure that the water is safe to drink.

**Detection Limit (DL)**: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

**Health Advisory Level (HA)**: The level of a contaminant in drinking water below which there is no known or expected health risk. MCLGs allow for a margin of safety.

**ND**: Not detected.
